DAILY STOCK WATCHLIST REPORT

Generated: 2026-07-30 | Pre-Market Edition (before 9:15 AM IST)

PRE-MARKET SIGNALS (July 30, 2026)

GIFT Nifty trading at 24,402, up 0.41% from previous close of 24,303 — signals mildly positive open. Sensex closed at 77,655 on July 29 (+1.16%, +889 pts). European markets mixed. Fresh FII buying of Rs 755 Cr and DII support of Rs 1,664 Cr provide cushion. India VIX low — subdued volatility expected.

QUICK-SCAN SUMMARY

Vodafone Idea Limited	IDEA	Rs 12.9	**Neutral**	**+79.1%**	4.1

PART 1 — DETAILED STOCK ANALYSIS

Vodafone Idea Limited

IDEA | INE669E01016

VERDICT: NEUTRAL — AGR relief boosted reported profit, but underlying operations remain weak with negative net worth and heavy debt

A. Financials	Revenue (FY26): Rs 44,789 Cr (+3.1% YoY) | Net Profit (FY26): Rs 34,552 Cr (includes Rs 55,622 Cr exceptional AGR gain) | 5-Year Sales CAGR: 1.36% (poor) | ARPU (Q4 FY26): Rs 190 (up 8.3% YoY from Rs 175)
ROE & D/E	ROE: 0.39 (weak) | D/E: Negative (negative net worth) | Bank debt reduced to Rs 726 Cr from Rs 2,326 Cr
P/E & P/B	P/E: 4.07 (depressed due to exceptional gain) | P/B: -3.96 (negative book value)
B. Sentiment	Mixed. AGR dues reduction of Rs 55,622 Cr provided a one-time boost, but underlying business remains loss-making. Stock gained ~79% in one year on AGR hopes and tariff hikes.
Tailwinds	AGR relief, tariff hikes lifting ARPU, 4G-to-5G transition underway, government stake provides implicit support
Headwinds	Negative net worth, continued subscriber losses to Jio/Airtel, massive capex needed for 5G, low interest coverage, competitive pricing pressure
Governance	Government of India holds ~33% stake; recent AGR order significantly reduced liabilities; company raised capital via FPO in 2024
C. Analyst View	Consensus: Sell | 4 Buy, 6 Hold, 11 Sell (out of 21 analysts)
Buy/Hold/Sell	Buy: 19% | Hold: 29% | Sell: 52%
Target Prices	Average: Rs 7.35 | Low: Rs 2.30 | High: Rs 15.30
D. Risks	Negative net worth, massive debt overhang, intense competition from Jio and Airtel, execution risk on 5G rollout, regulatory uncertainty
Volatility	High beta stock. 52-week range Rs 6.12 to Rs 15.34 — a 150% spread. Significantly more volatile than Nifty 50.

IN PLAIN ENGLISH

Vodafone Idea got a huge one-time boost because the Supreme Court reduced what it owed the government (called AGR dues) by about Rs 55,600 crore. That made its yearly profit look great on paper, but the actual phone business is still struggling — it's losing customers to Jio and Airtel, and the company's debts still far exceed its assets. The stock has rallied ~79% this year on hopes, but analysts mostly say 'sell' because the fundamentals remain fragile.

Aurobindo Pharma Limited

AUROPHARMA | INE406A01037

VERDICT: POSITIVE — Strong US generics pipeline, FTC-approved Lannett acquisition, consistent growth, and broad analyst Buy consensus

A. Financials	Revenue (FY25): Rs 31,720 Cr (+9.4% YoY) | Net Profit (FY25): Rs 3,490 Cr (+9.9% YoY) | Profit Margin: 11% (stable) | EPS: Rs 59.81 (up from Rs 54.15)
ROE & D/E	ROE: 10.8% (3-year avg, below 15% benchmark) | Debt levels manageable vs peers in pharma sector
P/E & P/B	P/E: 18.6x (38% discount to sector median of 33.4x) | Trading below historical average
B. Sentiment	Positive. Strong US market presence, Lannett acquisition (FTC approved, $250M) boosts complex generics portfolio. Stock up ~37% in a year.
Tailwinds	US generics market expansion, Lannett acquisition adding complex generics capacity, biosimilar pipeline, growing specialty portfolio
Headwinds	US FDA inspection risks, pricing pressure in US generics market, forex sensitivity, below-benchmark ROE
Governance	Stable promoter holding; FTC-approved Lannett acquisition deal closing June 2026; HSBC reiterated Buy with Rs 1,580 target
C. Analyst View	Consensus: Buy | 21 Buy, 1 Hold, 4 Sell (out of 26 analysts)
Buy/Hold/Sell	Buy: 81% | Hold: 4% | Sell: 15%
Target Prices	Average: Rs 1,519 | Low: Rs 1,020 | High: Rs 1,662
D. Risks	FDA regulatory actions, US drug pricing reforms, currency fluctuation, supply chain disruptions, patent challenges
Volatility	Moderate. 52-week range Rs 1,016 to Rs 1,637. Beta near market average. Less volatile than small/mid-cap peers.

IN PLAIN ENGLISH

Aurobindo makes generic medicines, especially for the US market. Business is growing steadily — revenue and profit both rose about 10% last year. The company recently got approval to buy a US company called Lannett for $250 million, which will help it make more complex medicines. Most analysts (81%) recommend buying the stock, and it's trading at a discount compared to similar pharma companies. The main worry is that the US drug regulator (FDA) could flag issues at their factories.

NCC Limited

NCC | INE868B01028

VERDICT: NEUTRAL — Record order book provides visibility, but NHAI debarment and muted stock performance weigh on sentiment

A. Financials	Revenue (FY26): ~Rs 16,850 Cr (+14.1% YoY) | PAT (FY26): Rs 680 Cr (+32.6% YoY) | Profit Margin: 3.2% (down from 3.7%) | Order Book: Rs 83,004 Cr (+16% YoY, Book-to-bill 4x)
ROE & D/E	ROE: 11.19% | D/E: 0.22 (low leverage) | Net debt: Rs 2,154 Cr
P/E & P/B	P/E: 15.9x | P/B: 1.2x | Reasonable valuation for infrastructure sector
B. Sentiment	Mixed to negative. Despite record order book (Rs 83,004 Cr), stock has fallen 34% in one year. NHAI debarment for 2 years (effective Feb 2026) is a significant overhang.
Tailwinds	Record order book with 4x book-to-bill, government infrastructure push, diversified order mix, low debt
Headwinds	NHAI 2-year debarment (no new highway tenders), margin compression, working capital challenges in infra sector
Governance	NHAI debarment of NCC and step-down subsidiary for 2 years effective Feb 17, 2026. Fresh order wins of Rs 535 Cr in June 2026 (non-NHAI).
C. Analyst View	Consensus: Buy (among covering analysts) | 12 analysts with average Buy rating
Buy/Hold/Sell	Buy: ~60% | Hold: ~25% | Sell: ~15%
Target Prices	Average: Rs 207 | Low: Rs 162 | High: Rs 269
D. Risks	NHAI debarment limiting highway order wins, thin margins typical of EPC sector, execution delays, working capital intensity, competitive bidding pressure
Volatility	Moderate-high. 52-week range Rs 130 to Rs 232. Stock down 34% in 1 year — underperforming Nifty 50 significantly.

IN PLAIN ENGLISH

NCC builds roads, bridges, and buildings. Their pipeline of future work (order book) hit a record Rs 83,000 crore, which means they have 4 years' worth of work lined up. Profit also grew 33%. However, the stock has fallen 34% because India's highway authority (NHAI) banned NCC from bidding on new highway projects for 2 years. That's a big deal since highways are a major revenue source. The company is pivoting to other infrastructure segments to compensate.

Hindustan Construction Company Ltd

HCC | INE549A01026

VERDICT: NEUTRAL — Debt reduction progress is encouraging, but revenue decline and high PE suggest caution

A. Financials	Revenue (FY26): Rs 3,970 Cr (-29.2% YoY) | Net Profit (FY26): Rs 166 Cr (+47% YoY) | Standalone PAT: Rs 206 Cr | Debt Reduction: 38% YoY to Rs 1,995 Cr
ROE & D/E	ROE: 10.91% | D/E: 0.48 (improved, was higher) | Total debt reduced 38% YoY to Rs 1,995 Cr
P/E & P/B	P/E: 55.0x (expensive) | P/B: 2.46x | Valuation stretched relative to earnings
B. Sentiment	Cautiously positive. Profit improved 47% and debt fell 38%, but revenue dropped 29%. Market cap Rs 5,679 Cr. Rights issue of Rs 1,000 Cr subscribed at 200%.
Tailwinds	Debt reduction momentum (38% YoY), improved profitability, successful Rs 1,000 Cr rights issue, government infra push
Headwinds	Sharp revenue decline (-29%), high PE multiple, execution challenges, legacy debt overhang still significant
Governance	100th AGM scheduled Aug 18, 2026. Rs 1,000 Cr rights issue subscribed at 200% — strong promoter/investor confidence signal.
C. Analyst View	Limited coverage. Target around Rs 30-35 (bull case)
Buy/Hold/Sell	Buy: ~40% | Hold: ~40% | Sell: ~20% (limited coverage)
Target Prices	Average: Rs 30 | Low: Rs 20 | High: Rs 35
D. Risks	Revenue volatility, execution delays on large projects, residual debt burden, thin analyst coverage, working capital stress
Volatility	High. 52-week range Rs 13.65 to Rs 28.50. Small-cap characteristics with wide price swings.

IN PLAIN ENGLISH

HCC is an old infrastructure company (100 years!) that builds dams, tunnels, and highways. They've been working hard to pay down debt — cutting it by 38% this year, which is good. Profit also jumped 47%. But there's a catch: their revenue (the money coming in from projects) dropped nearly 30%, which means they're completing old projects faster than winning new ones. The stock is thinly covered by analysts, so information is limited.

Adani Green Energy Limited

ADANIGREEN | INE364U01010

VERDICT: POSITIVE — Strong revenue growth, 91% EBITDA margins, aggressive capacity expansion; debt is high but manageable for growth stage

A. Financials	Revenue (FY26): Rs 13,820 Cr (+22% YoY) | Net Income (FY26): Rs 1,650 Cr (+25% YoY) | EBITDA Margin: 91.2% | Revenue CAGR (3yr fwd): 31% projected
ROE & D/E	ROE: 6.7% | D/E: ~7.6x (very high, growth-stage) | Net debt Rs 95,621 Cr (up from Rs 72,829 Cr YoY)
P/E & P/B	P/E: 153.2x (premium, down from 5-yr avg of 288x) | Forward P/E: ~79.5x | Sector avg: 23.3x
B. Sentiment	Bullish. Stock up 57% in one year, hit 52-week high of Rs 1,631. Brokerage raised target to Rs 1,800. Strong buy consensus.
Tailwinds	India's renewable energy push, 30% EBITDA CAGR expected over 5 years, capacity scale-up, 91% EBITDA margin, policy support
Headwinds	Very high debt (Rs 95,621 Cr), elevated PE multiple, interest rate sensitivity, grid connectivity delays, Adani group governance concerns
Governance	Part of Adani Group. Aggressive capacity expansion. Debt-to-capital ratio at 95.3% — high but typical for renewable energy developers.
C. Analyst View	Consensus: Strong Buy | 8 analysts with Buy rating
Buy/Hold/Sell	Buy: ~75% | Hold: ~15% | Sell: ~10%
Target Prices	Average: Rs 1,440 | Low: Rs 864 | High: Rs 1,800
D. Risks	High leverage (D/E ~7.6x), grid connectivity delays, regulatory changes, Adani group reputational risk, rising borrowing costs
Volatility	High. 52-week range Rs 767 to Rs 1,631. Large price swings — stock more than doubled from its low.

IN PLAIN ENGLISH

Adani Green runs solar and wind power plants. It's growing fast — revenue up 22% and it keeps over 91 paise of every rupee earned as operating profit, which is remarkable. The stock has rallied 57% this year. The catch is that the company has borrowed heavily (about Rs 95,600 crore) to build all these plants. That's normal for this kind of business, but if interest rates rise or projects get delayed, it could squeeze them. Most analysts are bullish because India needs a lot more clean energy.

Adani Power Limited

ADANIPOWER | INE814H01029

VERDICT: POSITIVE — Record EBITDA, strong ROE of 25%, massive capacity expansion plan backed by internal cash flows and global brokerage upgrades

A. Financials	Revenue (FY26): Rs 18,902 Cr (vs Rs 14,109 Cr YoY) | Net Profit (FY26): Rs 4,806 Cr (+45% YoY) | Revenue CAGR: 118.19% (far above industry median 17.6%) | Q1 FY27: Record EBITDA, revenue up 28% YoY
ROE & D/E	ROE: 24.74% (45% above 10-yr median of 17%) | Net debt/EBITDA target: below 3x | QIP of Rs 15,000 Cr approved
P/E & P/B	P/E: 38.0x | P/B: 7.87x | Premium valuation reflecting growth expectations
B. Sentiment	Bullish. Stock up 84% in one year. 3 global brokerages (Morgan Stanley, Cantor, Bernstein) gave Overweight/Outperform ratings post Q1 FY27 results.
Tailwinds	45 GW capacity target by 2031 (up from 42 GW), Rs 2 lakh crore capex funded internally, record EBITDA, power demand growth
Headwinds	High PE valuation, coal price volatility, regulatory risk on tariffs, large capex execution risk, environmental concerns
Governance	Board approved Rs 15,000 Cr QIP. Capacity expansion to 45 GW on schedule. 7,720 MW under construction.
C. Analyst View	Consensus: Overweight/Buy | Morgan Stanley: Rs 275, Cantor: Rs 266, Bernstein: Rs 220
Buy/Hold/Sell	Buy: ~70% | Hold: ~20% | Sell: ~10%
Target Prices	Average: Rs 248 | Low: Rs 220 | High: Rs 275
D. Risks	Coal price spikes, regulatory changes on power tariffs, execution risk on massive capex plan, environmental compliance, Adani group governance
Volatility	High. 52-week range Rs 110.45 to Rs 254.20. Stock nearly doubled from its low — high momentum but also high risk.

IN PLAIN ENGLISH

Adani Power runs coal and thermal power plants. The company is on a tear — profit jumped 45% and it just posted record operating earnings. It's planning to nearly triple its power generation capacity to 45 GW by 2031, spending about Rs 2 lakh crore mostly from its own earnings. Three major global investment banks recently said 'buy.' The stock has rallied 84% this year. The risk is that this ambitious expansion depends on coal prices staying reasonable and government regulations remaining favorable.

Waaree Energies Limited

WAAREEENER | INE377N01017

VERDICT: POSITIVE — India's largest solar module maker, 45% earnings CAGR, strong order book; US tariff risk mitigated by local manufacturing

A. Financials	Revenue (FY26): Rs 26,537 Cr | Net Profit (FY26): Rs 3,884 Cr | Earnings Growth (1yr): 71.3% | 5-Year Earnings CAGR: 45.2%
ROE & D/E	ROE: ~27% (strong) | D/E: Low (~0.12) | Long-term debt Rs 310 Cr only
P/E & P/B	P/E: 27.7x (25% below 10-yr median of 36.9x) | Reasonable for growth profile
B. Sentiment	Mixed-positive. Downgraded from Buy to Hold by some analysts, but Emkay maintains Buy with Rs 4,260 target (57% upside). US tariff risk (126% CVD) is key concern.
Tailwinds	India solar push, 5.15 GWh battery storage production started, US manufacturing expansion, strong earnings growth
Headwinds	US 126% CVD on Indian solar imports (final ruling July 2026), stock down 15% from highs, rating downgrade by some brokerages
Governance	Secured 212 MW solar module order. Subsidiary began BESS production at 5.15 GWh capacity (above planned 3.5 GWh).
C. Analyst View	Consensus: Buy | 9 Buy, 0 Hold, 5 Sell (13 analysts)
Buy/Hold/Sell	Buy: 69% | Hold: 0% | Sell: 31%
Target Prices	Average: Rs 3,494 | Low: Rs 2,109 | High: Rs 4,400
D. Risks	US countervailing duty (126% CVD), solar module price volatility, technology obsolescence risk, project execution, competition from Chinese manufacturers
Volatility	High. 52-week range Rs 2,403 to Rs 3,865. Down 30% from 52-week high. High growth stock with high volatility.

IN PLAIN ENGLISH

Waaree is India's biggest solar panel maker. Their profits shot up 71% last year, and they've grown earnings at 45% annually over five years — very impressive. They've also started making battery storage systems. The big worry right now is that the US government might slap a 126% tax on solar panels imported from India, which could hurt exports. But Waaree is building factories in the US to get around this. Most analysts still say 'buy,' with targets suggesting 30-60% upside from current prices.

Billionbrains Garage Ventures Ltd

GROWW | INE0HOQ01053

VERDICT: NEUTRAL — Dominant fintech platform with strong growth, but expensive valuation (PE 52x) and nascent public market track record

A. Financials	Revenue (FY26): Rs 5,242 Cr | Net Profit (FY26): Rs 2,440 Cr | Q4 FY26 PAT: Rs 686 Cr (+122% YoY) | Revenue Growth (3yr fwd): 26.9% CAGR projected
ROE & D/E	ROE: 50.03% (exceptional) | D/E: Minimal (tech platform, asset-light model)
P/E & P/B	P/E: 52.4x (vs sector avg 28.6x — 83% premium) | P/B: 13.25x (sector avg 4.83x)
B. Sentiment	Positive but expensive. Stock up 81% since IPO (listed Nov 2025 at Rs 112). India's largest digital investment platform by active users.
Tailwinds	India's financialization trend, largest digital investment platform, 122% Q4 profit growth, asset-light model, massive user base
Headwinds	Expensive valuation (PE 52x), regulatory risk from SEBI, limited public track record (listed Nov 2025), competition from Zerodha/Angel
Governance	Listed Nov 2025 via IPO at Rs 95-100 band. IPO subscribed 17.6x. Currently trading at Rs 203 — 103% above issue price.
C. Analyst View	Consensus: Hold | Limited analyst coverage given recent listing
Buy/Hold/Sell	Buy: ~35% | Hold: ~45% | Sell: ~20% (estimated, limited coverage)
Target Prices	Limited formal targets available. Stock near Rs 203 vs IPO price Rs 112.
D. Risks	SEBI regulatory changes on discount broking, valuation premium compression, competition, customer acquisition cost inflation, market downturn reducing trading volumes
Volatility	Moderate-high. 52-week range Rs 112 to Rs 227. Recently listed, so limited history. Trading at 81% above IPO price.

IN PLAIN ENGLISH

Groww (officially Billionbrains Garage Ventures) is India's most popular investment app — think of it as the platform millions of Indians use to buy stocks, mutual funds, and more on their phones. The company is growing incredibly fast, with profits more than doubling. It listed on the stock exchange in November 2025 and the stock has nearly doubled since. The concern is that at 52 times earnings, you're paying a premium price. If India's stock market activity slows down or regulators change rules, the stock could correct.

Digilogic Systems Ltd

544684 | INE1OOT01028

VERDICT: POSITIVE — Strong defence sector tailwinds, 34% profit growth, near-zero debt, attractive PE vs peers, capacity expansion underway

A. Financials	Revenue (FY26): Rs 77.4 Cr (+8.4% YoY) | PAT (FY26): Rs 10.43 Cr (+33.8% YoY) | EBITDA (FY26): Rs 15.18 Cr (+16.5% YoY) | EBITDA Margin: 19.6% (+152 bps YoY)
ROE & D/E	ROE: ~22% (strong for micro-cap) | D/E: 0.04 (near zero debt, down from 0.40 in FY25)
P/E & P/B	P/E: 32.8x (65% discount to defence sector median of 93.6x) | Deeply undervalued vs peers
B. Sentiment	Positive. Defence sector darling. New Rs 12.98 Cr order from Defence PSU. IPO listed Jan 2026 on BSE. Capacity expansion of Rs 51.74 Cr announced.
Tailwinds	India's defence indigenization push (Make in India), new orders from Defence PSUs, capacity expansion, BESS subsidiary, FY27 guidance 25-30% revenue growth
Headwinds	Micro-cap with limited liquidity, BSE-only listing, concentrated client base (defence PSUs), small revenue base (Rs 77 Cr)
Governance	Listed Jan 2026 on BSE. New defence subsidiary formed. Rs 51.74 Cr capacity expansion announced. Clean balance sheet (D/E 0.04).
C. Analyst View	No formal analyst coverage (micro-cap). PE at deep discount to defence sector peers.
Buy/Hold/Sell	No formal coverage available (micro-cap stock)
Target Prices	No formal analyst targets. Market cap Rs 342 Cr.
D. Risks	Micro-cap liquidity risk, concentrated defence client base, order lumpy-ness, BSE-only listing limits institutional interest, small scale
Volatility	High. 52-week range Rs 72.95 to Rs 133.90. Micro-cap with wide price swings. ~83% spread from low to high.

IN PLAIN ENGLISH

Digilogic makes specialized testing and radar simulation equipment for India's military and aerospace sector. It's a tiny company (Rs 342 crore market cap) but growing fast — profits jumped 34% and it has almost zero debt. India's push to build its own defence equipment ('Make in India') is a big tailwind. The company just announced Rs 52 crore in expansion plans and got a fresh defence order. The risk is that it's very small, trades only on one exchange, and depends heavily on government defence contracts, which can be lumpy.

PART 2 — GOVERNMENT INVESTMENT TRACKER

Recent government investments, disinvestments, and policy moves affecting listed companies (last 1-2 weeks / recent activity)

Coal India (COALINDIA)	Government sold 2% stake via OFS, raising ~Rs 5,500 Cr	2026 (H1)	The government sold a small slice of its ownership in Coal India to raise money. This is part of a bigger plan to raise Rs 80,000 Cr by selling stakes in state-owned companies this year.
NHPC Ltd (NHPC)	Government sold 6% stake via OFS, raising Rs 4,357 Cr	2026 (H1)	NHPC runs hydropower plants. The government sold 6% of its shares to public investors to raise funds. This dilutes government ownership slightly but brings in cash for the budget.
GIC Re (GICRE)	Government sold 5% stake via OFS, raising Rs 3,090 Cr	2026 (H1)	General Insurance Corporation is India's main reinsurance company. Government sold a 5% stake. Such sales can increase the stock's availability in the market (called 'free float'), which is generally seen as healthy.
IDBI Bank (IDBI)	Strategic sale process underway — Expression of Interest received	Ongoing 2026	The government and LIC together own most of IDBI Bank and want to sell their combined ~60% stake to a private buyer. This is one of India's biggest-ever bank privatization attempts. The process is moving forward.
BEML, SCI, NMDC Steel, HLL Lifecare, PDIL	Strategic disinvestment Expression of Interest completed for all five	2026	The government wants to sell off five more state-run companies to private buyers. Potential buyers have submitted their interest. These are in sectors like mining equipment (BEML), shipping (SCI), and steel (NMDC Steel).
PLI Scheme Beneficiaries (Multiple Sectors)	Rs 2.40 lakh Cr total investment attracted; Rs 21,534 Cr disbursed; 14.15 lakh jobs created across 14 sectors	As of March 2026	The government's scheme to boost domestic manufacturing has attracted massive private investment. Solar panel makers got the most (Rs 64,873 Cr), followed by pharma (Rs 45,158 Cr) and auto (Rs 44,326 Cr). This benefits listed companies in these sectors.
FY27 Disinvestment Target	Union Budget 2026-27 set Rs 80,000 Cr target via disinvestment and asset monetization	Feb 2026 Budget	In the February 2026 budget, the finance minister set a target to raise Rs 80,000 crore by selling government stakes in public companies and monetizing assets. So far, about Rs 25,000 Cr has been raised.
